

Haiti
January 12, 2010

A photograph showing a makeshift settlement with people and tents. In the foreground, a young boy in a red and white striped shirt stands looking towards the camera. In the background, a woman in a white shirt is washing clothes in a yellow basin, and another woman is sitting on a bench. The ground is dirt and littered with debris. The scene is set in a temporary living area with various colored tarps and tents.

230,000 were killed by the earthquake.

Over 1 million were left homeless.

January 12, 2013 marks three years since the devastating quake.

There is still work to be done...

Operation USA responded rapidly to the disaster — shipping emergency aid within days of the earthquake.

Over **\$5.5 million** in donated medical, energy, food and shelter supplies were sent to Haiti—getting essential aid, as well as medical personnel, to partner agencies on the ground in Port-au-Prince, and the equally hard hit city of Jacmel.

The earthquake changed daily life for nearly all in Port-au-Prince...

Long-term partner **L'Athletique d'Haiti** transformed its soccer fields to house over 500 families, a far cry from its previous role as an after-school sports program.

OpUSA made emergency grants to **LADH** for food and supplies—and continues to support the great work being done there today.

While not as well reported, the city of **Jacmel** suffered alongside Port-au-Prince. 70% of Jacmel's buildings were damaged or destroyed.

Operation USA has focused a good portion of its relief and recovery efforts here—knowing it can make a significant impact in this smaller and somewhat overlooked community.

OpUSA's largest project to date is the rebuilding of the public school, **Ecole Nationale Jacob Martin Henriquez**, in Jacmel.

Built in partnership with **Honeywell Hometown Solutions**, the new primary school is one of the biggest in the region — and was one of the first large-scale recovery projects to be completed.

The new 1.5 acre campus includes:

- 9 buildings
- 15 classrooms
- library
- computer lab
- community garden
- cafeteria
- basketball court
- soccer field

Designed pro bono by **Gensler**, with structural engineering by seismic experts **Miyamoto International**, the campus was designed to withstand future earthquakes.

October 2011: After a long journey... the first day of school arrives!

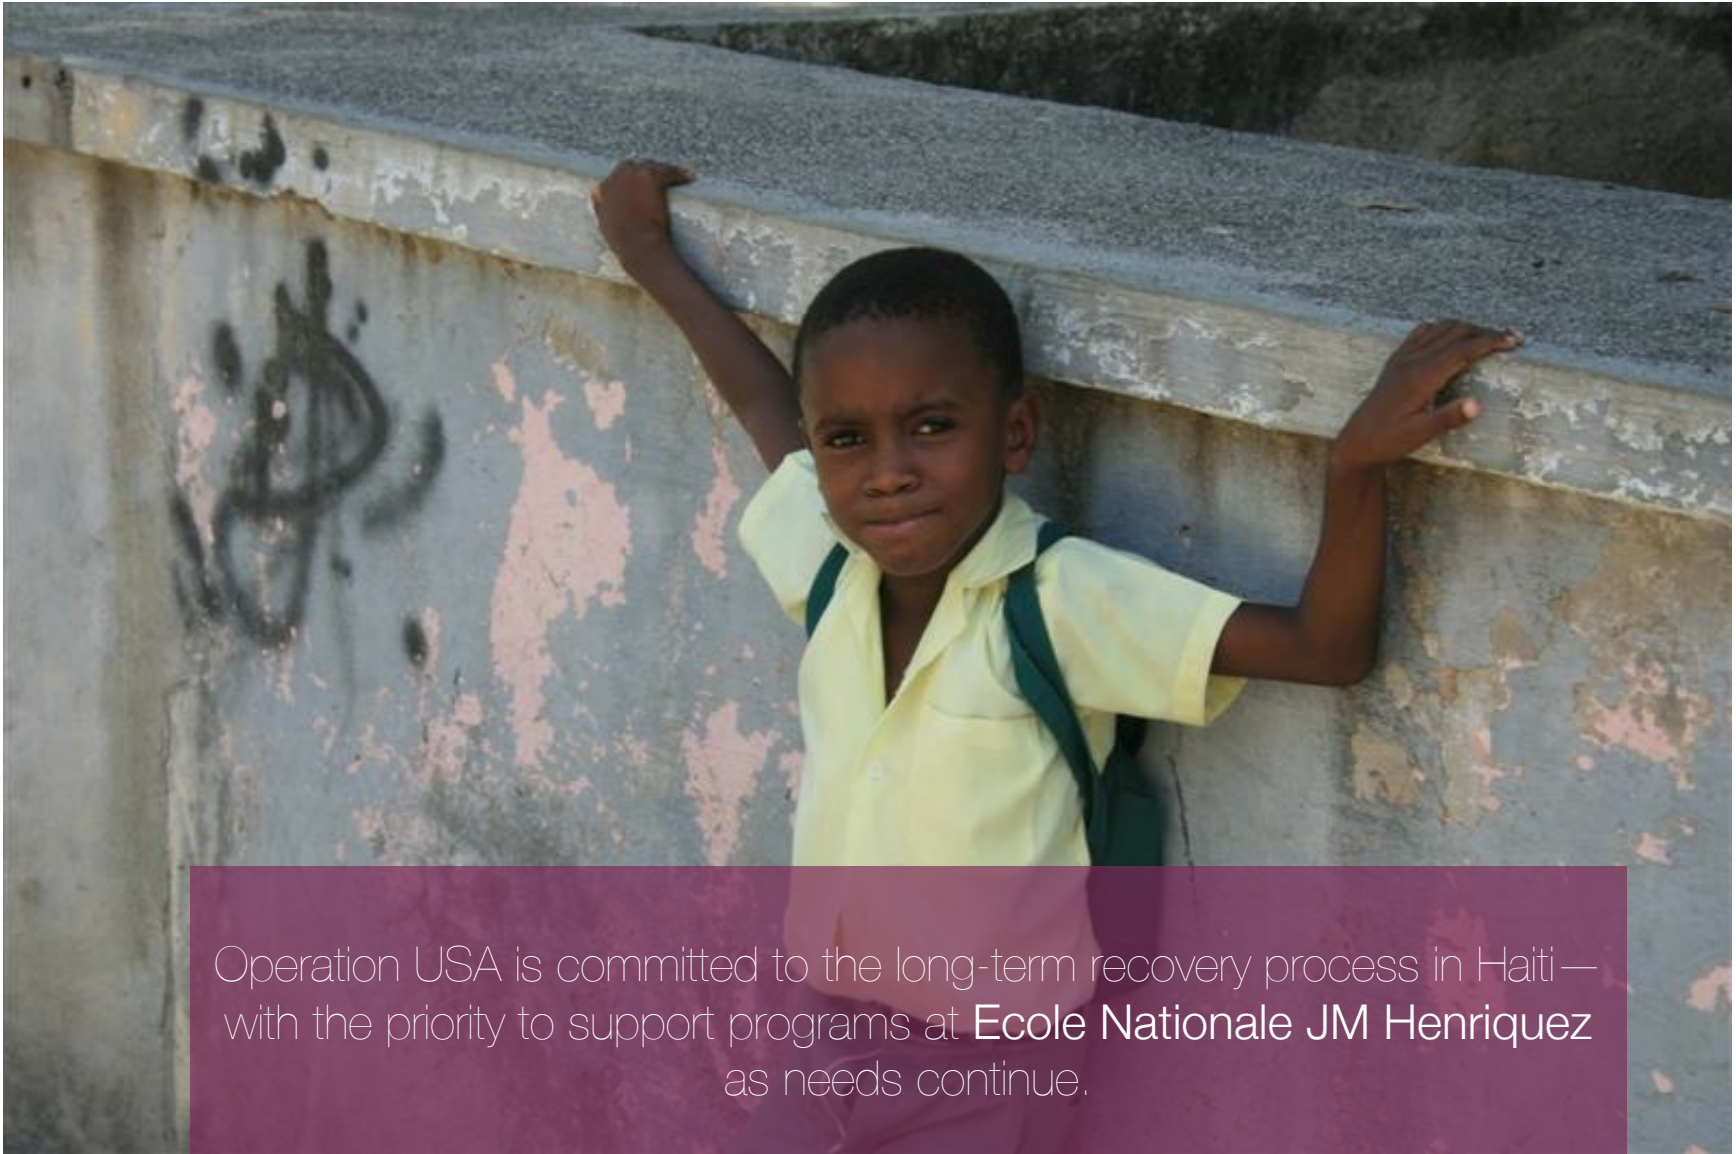

Ecole Nationale JM Henriquez is now home to over 900 students who could not otherwise afford to go to school.

Eating lunch at school is often the only meal some children receive each day...

Operation USA funds a daily feeding program — providing a free hot meal to all students enrolled at JMH.

Operation USA's work in Jacmel included the creation of hundreds of jobs. At least 25 of those workers were additionally given professional skill training in seismically-sound construction methods, as part of the construction process of **Ecole Nationale Jacob Martin Henriquez**.

Operation USA is committed to the long-term recovery process in Haiti—
with the priority to support programs at **Ecole Nationale JM Henriquez**
as needs continue.
